Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “motive distribution system” for claims 1 and 10, “extraneous temperature regulation system” for claim 2 “timer” for claim 6, “sensor” for claim 7 and “motive thermal transfer medium” for claim 12 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 8-10, 12 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Carmi et al., (5,060,479). Carmi et al., disclose a thermoelectric device for heating or cooling food comprising a removable cook vessel 9; a Peltier device 22 having an active side toward the cooking vessel 9 and a waste side away from the cooking vessel with heat sink 23, a blower/fan 30, thermally conductive material 21, an interface S/adaptor, the compartment 8 being a temperature regulation it is inherently heat insulated. See Fig. 1 and 2 and column, 2, line 43 to column 3, line 56.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 6, 7, 8, and 11 rejected under 35 U.S.C. 103(a) as being unpatentable over Carmi et al., in view of Trombley et al., (6,244,165). Carmi et al., disclose the invention substantially as claimed as stated above except a timer, a temperature sensor, a remote interface and a controller. Trombley et al., teach the use of a timer (column 3, line 10), a temperature sensor 162, a remote interface (Fig. 6) and a microprocessor 163 in a cooling heating food preparation system 100 for the purpose of controlling a food preparation remotely in a convenient way. Therefore, it would have been obvious to one having ordinary skill in the art at the time invention was made to modify the thermoelectric/Peltier cooking device of Carmi et al., in view of Trombley et al., such that a timer, a temperature sensor and a remote interface could be provided in order to control food preparation remotely in a convenient way. Trombley also disclose insulator 111, remote control 164. See Fig. 1-2, 4, 6-7 and column 3, lines 7-44.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad M. Ali whose telephone number is (571) 272-4806. The examiner can normally be reached on Monday to Friday.
